

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-6 (canceled)

Claim 7 (previously presented): A graphical user interface comprising:

- a primary application adapted to be displayed on a device and adapted to receive a print input selection to indicate a print task to be performed associated with the primary application;
- a proxy interface adapted to be displayed on the device when the print input selection is received, wherein the proxy interface comprises settings associated with the print task to be performed; and
- a timeout timer, associated with when the proxy interface is displayed, operable to execute the print task using the settings upon expiration of the timer.

Claim 8 (previously presented): The graphical user interface of claim 7, wherein the timer is visible on the graphical user interface.

Claim 9 (previously presented): The graphical user interface of claim 7, wherein the timer is hidden.

Claim 10 (previously presented): The graphical user interface of claim 7, wherein the settings are default settings for the print task.

Claim 11 (previously presented): The graphical user interface of claim 7, wherein the settings are current settings for the print task.

Claims 12-15 (canceled)

Claim 16 (previously presented): A method of providing a user interface, the method comprising the steps of:

- displaying a proxy interface in response to a print input selection received by a primary application interface, wherein the print input selection is associated with a print task to be performed, and wherein the proxy interface comprises settings associated with the print task and the proxy interface is adapted to receive a proxy interface input;
- starting a timer when the proxy interface is displayed; and
- if the timer expires without the proxy interface receiving a proxy interface input, executing the print task using the settings associated with the print task.

Claim 17 (previously presented): The method of claim 16, the method further comprising the step of:

- if the proxy interface input is received prior to the expiration of the timer, providing a user interface adapted to receive one or more changes associated with the settings and to stop the timer.

Claim 18 (previously presented): The method of claim 16, wherein the executing of the print task step further comprises the step of sending the print task to a printer.

Claim 19 (previously presented): The method of claim 16, wherein the proxy interface is presented as a transparent overlay.

Claim 20 (previously presented): The method of claim 16, wherein the proxy interface further comprises a bar.

Claim 21 (previously presented) The method of claim 16, wherein the proxy interface further comprises an interface located on the periphery of the primary application window.

Claim 22 (previously presented): The method of claim 16, wherein the primary application is adapted to receive primary application input while the proxy interface is displayed.

Claim 23 (previously presented): The method of claim 16 wherein the primary application is a document-creating application.

Claim 24 (previously presented): The method of claim 16 wherein the proxy interface is closed when the timer expires.

Claim 25 (previously presented): The method of claim 17, wherein the provided user interface is part of the proxy interface.

Claim 26 (previously presented): The method of claim 17 further comprising the step of restarting the timer.

Claim 27 (previously presented): A device adapted to present a graphical user interface, the graphical user interface comprising:

- a proxy interface displayed in response to a print input selection received by a primary application interface, wherein the print input selection is associated with a print task to be performed, and wherein the proxy interface comprises settings associated with the print task and the proxy interface is adapted to receive a proxy interface input; and
- a timer adapted to start when the proxy interface is displayed, wherein if the timer expires without the proxy interface receiving the proxy interface input, executing the print task using the settings associated with the print task.

Claim 28 (previously presented): The device of claim 27, wherein the primary application interface is a document-creating application.

Claim 29 (previously presented): The device of claim 27, wherein the proxy interface is adapted to receive one or more changes associated with the settings and to stop the timer.

Claim 30 (previously presented): The device of claim 27, wherein the primary application is adapted to receive primary application input while the proxy interface is displayed.
